

OUR SOLUTION

We are a **medtech** solution that **connects patients** to a **secure app** using personalized RFID or QR codes. Using the traceable patient codes, **patients measure their vital signs** with Cardiotrack's different **medical devices**. We compile the **data** on a **health dashboard** and send automatic **alerts** and **reports** to **patients' clinicians** to provide information for further analysis.

PRODUCTS

BLOOD PRESSURE

Massive blood pressure measurement without required personnel
