

# More Revenue and Loyal Customers Using **Chatbots**

We help restaurants to take control of their customer relationships by deploying our platform on top of their social media profiles, enabling them to start interacting with their customers on the platform of their choice. FoodBot allows you to run a loyalty program and take orders on your social media platform, allowing you to keep 100% of your revenue and customer database instead of paying money to 3rd party apps.

## Online Order at **0% Commission**

Have your own e-commerce and take orders via your WhatsApp, Messenger, Facebook, website, and even convert your Instagram followers into customers with exclusive buttons & stickers. Own the customer data and never pay commissions to 3rd party apps.

## Manage & Take **Reservations**

Integrate your OpenTable widget or use our proprietary reservation system at no extra cost to take reservations directly on the social media channels. We help you take reservations directly from your Facebook posts and Messenger without any extra fee per reservation.

## Integrated **Rewards Program**

Run your rewards program directly on the messaging platform where your customer already exists. The rewards program integrates with the online ordering system and your POS so that you can reward your customers for both online and offline transactions.
