

3D NEXT

Human 3D Scan Solutions

3D Total body mapping for Dermatology

3D Next is developing a 3D total body mapping system for the initial detection of skin cancer and other skin disorders that can be used in hospitals and dermatology clinics.

Time Consuming

Taking about 25 pictures

significant time savings

takes images of the entire body in a matter of seconds.

Total body mapping for Dermatology

2D

What is the problem

3D

What is the Solution

incorrect diagnosis

Due to changes in the patient's posture and gesture during periodic examinations.

reduce misdiagnosis

thanks 3D body tracking technology.

Patient status monitoring

Due to the large number of separate photos per visit

lesion monitoring in 3D avatar

measure and track lesions in 3D avatar

Benefits for Clinics & Hospitals

More accuracy in ABCD Test

Using 3D tracking system

More revenue

4 time faster comparing 2D machine

Easy patient Documentation

Using 3D Avatar for refer note & Photo

improved patient experience

2 sec scan time vs 15 min in 2D

please watch our video in www.3dnext.ca

We need your kindly suggestion to improve 3D Next MP product please give us 15 min of your time to talk with our team
